RECORDS OF WATER-LEVEL MEASUREMENTS IN
MITCHELL, NOLAN, STERLING, AND TOM GREEN COUNTIES, TEXAS
1938 THROUGH 1957

Compiled by

Frank A. Rayner, Geological Engineer
Texas Board of Water Engineers

March 1959

INTRODUCTION

The Texas Board of Water Engineers is charged with making, independently or in cooperation with other state and federal agencies, scientific investigations of the source, amount, and quality of groundwater supplies. To evaluate effects of ground-water development in relation to available supply, periodic measurements of water levels are made in principal reservoirs of the state through an observation well program conducted cooperatively by the Texas Board of Water Engineers and the United States Geological Survey.

This bulletin contains measurements of the depth to water in feet below land-surface datum in 27 wells in Mitchell County, 2 wells in Nolan County, 4 wells in Sterling County, and 61 wells in Tom Green County. The period of record covers measurements made in observation wells from 1938 through 1957.

Observation well location maps precede the corresponding table of water-level measurements for each county. Hydrographs of water levels in selected wells in Mitchell and Tom Green Counties and a lake-level hydrograph of the San Angelo reservoir follow the associated table of water-level measurements. Precipitation charts for Colorado City and San Angelo are combined with their respective hydrographs.
