Introduction

by

Samuel F. Turner

Associate Hydraulic Engineer

U. S. Geological Survey

The purpose of this survey was to obtain information concerning existing wells and springs and the quantity and quality of water they yield, and put down test holes where additional information was needed.

This project was part of a statewide Works Progress Administration project known as a "Statewide Inventory of Water Wells," sponsored by the State Board of Water Engineers. The Division of Ground Water of the U. S. Geological Survey cooperated in the technical direction of the project and the Bureau of Industrial Chemistry of The University of Texas furnished laboratory space and equipment and supervised the chemical analyses.

The analyses were made by chemists employed on Works Progress Administration Project 6909 at Austin, Texas, sponsored by the State Planning Board and by the State Board of Water Engineers. This release was typed and assembled by typists and draftsmen employed on this project.

The field work in Cherokee County was started on March 3, 1936, and completed on June 30, 1936. This project was Project 2074 of District 2 of the Works Progress Administration, Tyler, Texas. G. H. Cromack, a geologist, was project superintendent. Mr. Cromack deserves great credit for his work and for the many extra hours he spent on the project. The Tyler office of the Works Progress Administration made this work possible by their constant help and cooperation.

This release contains the well and spring records and well logs obtained by the project superintendent, logs of the test holes drilled by the W. P. A. labor, and the chemical analyses of water from privately owned wells and springs. Locations of all wells and springs listed are shown on the folded map in the back of the release.

The test wells were drilled by W. P. A. labor using a soil auger, drop auger, churn drill, and a sand bucket. Samples were collected at one foot intervals by the well driller in charge of the party. The project superintendent studied these samples and compiled the logs.

Records of wells in Cherokee County, Texas

(All wells are bored or drilled unless otherwise noted in the remarks column.)

| No. | Distance from Jacksonville | Survey | Owner | Driller | Date completed | Depth of well (ft.) | Diam-eter of well (in.) | Height of measuring point above ground (ft.) ^{a/} |
